

Environmental Management Notes

I] Textbook Questions:

2 Marks Questions:

1. Write short notes:

a. Environmental Conservation.

[2026, 2023]

Ans:

1. Environmental conservation is the protection of the environment for the future generations.
2. We are facing many environmental problems due to various natural and artificial factors like earthquakes, floods, population explosion, industrialization etc.
3. Environmental conservation can be achieved by environmental education, enacting laws and acts for environment protection, planting trees and preventing any harm to the biotic and abiotic factors.
4. Today all the countries have accepted the responsibility of environmental protection and it is also our social responsibility to protect environment.

b. Chipko Movement of Bishnoi.

Ans:

1. The Chipko Movement was a forest conservation movement where people clung on to trees to prevent them from being cut.
2. Way back in 1730 AD, in Khejarli village of Rajasthan, 363 Bishnoi's sacrificed their lives to save khejri trees.
3. This movement created a precedent for starting of non-violent protest in India and inspired many eco groups to help slow down the rapid deforestation, create ecological awareness, and conserve the environment.
4. The success of Chipko movement lies in the fact that it saved thousands of trees from being felled.

c. Biodiversity

OR

The types of biodiversity

[2025, 2020, 2023]

Ans:

1. Biodiversity is the richness of living organisms in nature due to presence of varieties of organisms. Biodiversity occurs at three different levels.

2. Genetic Diversity

Occurrence of diversity among the organisms of same species is genetic diversity. Ex. Each human being is different from other.

3. Species Diversity

Innumerable species of organisms occur in the nature. This is called as species diversity. Species diversity includes various types of plants, animals and microbes.

4. Ecosystem Diversity

Many ecosystems are present in each region. Each ecosystem has its own characteristic animals, plants, microbes and abiotic factors.

d. Sacred Groves.

[2020]

Ans:

1. The forest conserved in the name of God and considered to be sacred is called as sacred grove.
2. These are in fact 'sanctuaries' conserved by the society and not by the government forest department.
3. As it has been conserved in the name of God, it has special protection.
4. These clusters of thick forests are present not only in Western Ghats of India but in the entire country. More than 13000 sacred groves have been reported in India.

e. Disaster and its management.

Ans:

1. Disasters are harmful events that frequently occur in the environment and cause human, material, economic, and environmental losses. Examples include floods, famines, cyclones, and earthquakes.
2. Disasters are classified into two types: natural and man-made disasters. The impact of disasters is determined by their duration and aftereffects.
3. Disaster management is the prevention of disasters by developing plans to deal with them or gaining the necessary skills.
4. It is separated into two parts: pre-disaster management (such as gathering information, remaining alert, and so on) and post-disaster management. (For example, rescue operations, etc.)

2. Answer the following.

a. Write the factors affecting environment.

[2023]

Ans:

1. At present, many environmental problems have been arisen due to effect of various natural factors like earthquakes, floods, tsunami etc. and manmade factors like population explosion, hunting, deforestation etc. on the Earth.
2. Environmental pollution is one of those main factors. Generally, contamination of any material is its pollution.
3. Unnecessary and unacceptable change in the surrounding environment due to natural events or human activities are called as environmental pollution.
4. Various reasons like population explosion, fast industrialization, and indiscriminate use of natural resources, deforestation, and unplanned urbanization are responsible for environmental pollution.

b. Write the names of biodiversity hot spots.**Ans:**

1. Biodiversity Hotspots are the richest and most threatened reservoirs of plant and animal life on Earth. 34 highly sensitive biodiversity hotspots are reported all over the world.
2. Presently, only 2.3% area of the Earth has been left over with sensitive spots.
3. It includes 1,50,000 plant species which are 50% of the world count.
4. Some of the biodiversity hotspots present in India are -
 - a. Eastern Himalayas
 - b. Indo-Burma
 - c. Western Ghats
 - d. Sundaland (Andaman and Nicobar)

3 Marks Questions:**Answer the following questions.****1. What are the meanings of following symbols? Write your role accordingly. [2019, 2022, 2023]**

1. This is - recycle symbol. It is used to indicate that the article can be reused and recycled.
2. I will give such articles like tetra packs, plastic bottles etc. with this sign to a scrap dealer for recycling.
3. Materials like shoe boxes, used CDs and cloth can be reused to make new articles.

1. This is Save Water symbol. It is used to indicate that we should not use and waste water unnecessarily.
2. Water is a very precious resource. It is my duty to ensure that water is conserved and not wasted. I will use less water.
3. I will close the taps and get the leaking taps repaired. I won't throw water away, I will reuse the water for watering plants, cleaning etc.

1. This is symbol of solar panel. It indicates to use renewable solar energy.
2. I will install solar panels on the roof of my house. I will use electricity made using solar panels for my home.
3. I will use devices which can be charged and run on solar energy.

2. Reorganize the following food chain. Describe the ecosystem to which it belongs.

Grasshopper – Snake – Paddy field – Eagle – Frog.

Ans:

1. Food chain: Paddy field - Grasshopper - Frog -Snake – Eagle [2025, 2026]
2. This food chain belongs to the land ecosystem (grassland). A paddy field is a field where rice is grown. Grasshoppers inhabit grasslands and paddies and feed on grass-like crops.
3. As paddies are kept flooded with water, they provide a good habitat for frogs and snakes.
4. Grasshoppers are eaten by frogs which, in turn, are eaten by snakes.
5. Eagles feed on snakes.

3. Why does the human beings have important place in environment?

OR Humans have a crucial role in maintaining environmental balance. [2023]

Ans:

1. Since existence of human, there is interrelationship between human and environment. Human stepped on the Earth long after formation of Earth.
2. On the Earth, human being proved its superiority as compared to other animals with the help of characters like intelligence, memory, imaginary ability, etc.
3. Human established domination over the nature. Human utilized all the natural resources as much as possible.
4. In an attempt to live a satisfactory life, human kept on snatching from the nature as much as possible and this led to increase in problems.
5. From this entire scenario, we can understand that human has crucial role in maintaining the environmental balance.
6. If human has disturbed the environmental balance, then human itself only can conserve and improve the quality of nature.

4. How the biodiversity can be conserved?

[2024, 2025, 2019]

Ans:

Biodiversity be conserved by:

1. Protecting the rare species of organisms.
2. Establishing national parks and sanctuaries.

3. Declaring some regions as 'bioreserves'.
4. Projects for conservation of special species.
5. Conserving all plants and animals.
6. Observing the rules.

5. What do we learn from the story of Jadav Molai Peyang?

[2022]

Ans:

1. Jadav Molai Payeng has been a forest worker since the age of 16 years. He was an active participant in the Social Afforestation Project started by the Social Forestry Department in 1979.
2. As a result of his continuous work of planting and caring for trees, a once barren area witnessed a forest cover over 1,360 acres of land.
3. Now, this jungle in Kokilamukh of Jorhat district of Assam is well known as 'Molai Jungle'.
4. He has been awarded with the prestigious 'Padmashree' award by government of India for this unparalleled work
5. From his life, we learn that we can achieve a noble cause if we are determined and committed to it.
6. Many people come together to destroy the forest, but a single person, if determined, can establish a new forest!

II] Extra - Previous Years' Questions: (PYQs)

1 Mark Objectives:

1. MCQS:

1. _____ of West Bengal is reserved for tigers. [2025]
(A) Manas National park (B) Western Ghat (C) Molai Jungle **(D) Sundarban National Park**
2. One of the rare species is _____. [2024]
(A) Lesser Florican **(B) Red Panda** (C) Tiger (D) Shekhru
3. The apex consumer is _____. [2023]
(A) Eagle (B) Frog (C) Snake (D) Grasshopper
4. Giant squirrel is an example of _____ threatened species. [2022]
(A) Endangered (B) Rare (C) Vulnerable **(D) Indeterminate**
5. Which day is observed as World Biodiversity Day? [2026]

Ans: 22nd May is observed as World Biodiversity Day

6. Match the pair:

[2024]

Column A	Column B
Biotic Components	a. Soil b. Plant c. sunlight

7. Match the pair:

[2023]

Column A	Column B
Forest conservation Act	★ a. 1986 b. 1980 c. 1970

8. Correlation:

Western Ghat : Asiatic lion

::

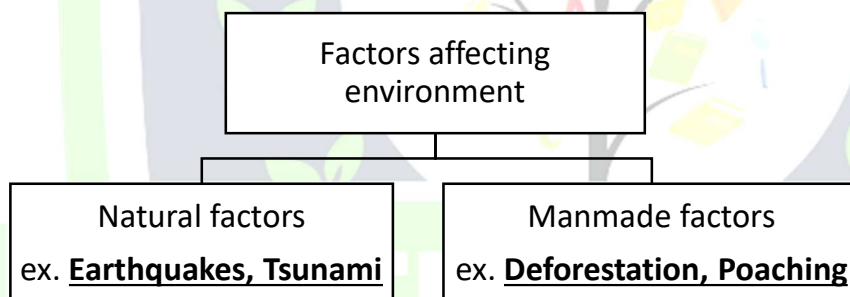

Sundarban Sanctuary : Tiger

[2022]

2 Marks Questions:

1. Complete the concept map:

[2026]

2. Read the paragraph and answer the questions:

[2026]

Paddy is cultivated on a large scale in various states of South India. Paddy fields are frequently attacked by grasshoppers. Frogs are also present in large numbers in the mud of paddy fields to feed upon grasshoppers and snakes are also present therein to feed upon their favourite food frogs. However, if the frog population declines all of a sudden.

- what will be the effect on paddy crop?
- Number of which components will increase?

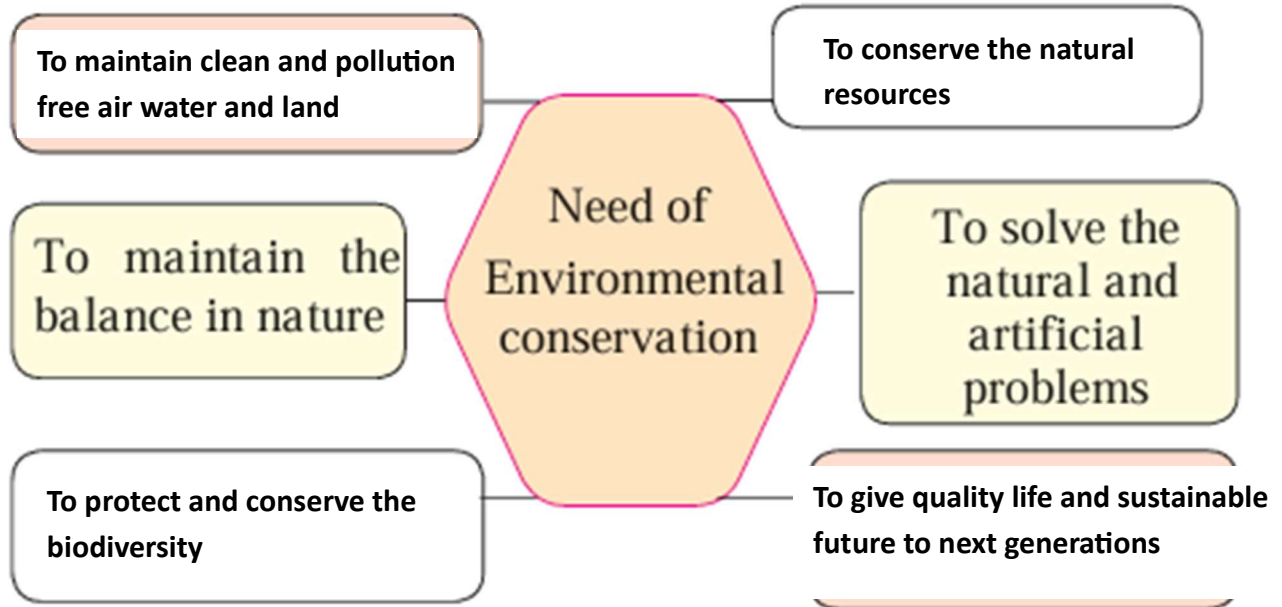

Ans:

- If the frog population declines sudden the grasshoppers will not be eaten So their number will increase greatly These grasshoppers will feed on and damage the paddy crop Hence the paddy crop yield will be badly affected and reduced.

- b. If frog population declines then the number of grasshoppers will increase as their Predator Frog is absent.

3. Complete the following flow chart:

[2024]

4. Write four adverse effects of radiations on human body.

[2024]

Ans:

Some of the effects of radiations are as follows

1. Cancerous ulceration occurs due to higher radiations of X-rays.
2. Tissues in the body are destroyed.
3. Genetic changes occur.
4. Vision is adversely affected

5. what is environment? Write two types of environments.

[2022]

Ans:

1. Environment is a broad concept.
2. Physical, chemical and biological factors affecting the living organisms in any possible way is collectively called as environment.
3. In short, environment is the condition in surrounding. It includes many biotic, abiotic, natural and artificial factors.
4. There are two main types of environments. One is natural environment and other is artificial environment.

★ 3 Marks Questions: ★

1. Give two examples of each of the following threatened species given below. [2026]

- a. **Endangered species** **Ans:** Lion Tailed Monkey, Lesser Florican
 b. **Rare species** **Ans:** Red Panda, Musk Deer
 c. **Vulnerable species** **Ans:** Tiger, Lion

2. Explain the meaning of the following symbols. Write your role accordingly. [2024]

1. this is waste management symbol. It indicates to throw the garbage in dustbin.
2. I will throw waste/ litter in the dustbin and also encourage others for the same
3. I will organize cleanup drives with elders and awareness campaigns.

1. this is save/ conserve energy symbol. It indicates to save energy.
2. I will switch off electrical appliances like lights, fans etc. when not in use.
3. I will use ACs and washing machines etc. to the minimum.

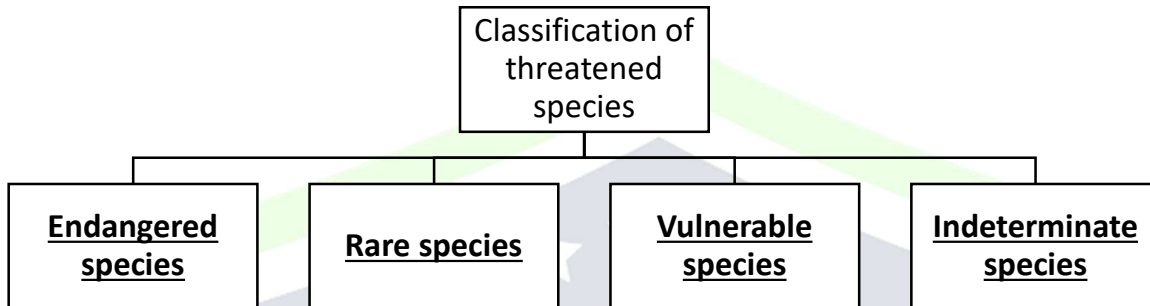

1. this is Save fuel symbol. It indicates us to save fuel.
2. I will save fuel by opting for eco-friendly and public transport.
3. I will avoid using vehicles that runs on non-renewable fossil fuels like diesel, petrol etc that contribute to pollution and global warming.

5 Marks Questions:

1. Complete the following flow chart explaining my role in environmental conservation. [2025]

2. Answer the following questions based on environmental conservation and biodiversity. [2024]**a. Complete the flow chart:****b. How can biodiversity be conserved? Give any four points.***Refer page no. 5 Q. 5.***c. Complete the flow chart:**

Colour of the pages of red list of endangered species

**MASTER CLASSES**
